Comments: The UAA was conducted in June, 2005 and no WBCR was observed at any of the six sites evaluated. Evidence of human use was observed at three sites, and several sites were close to parks and trails. The stream met both the average and maximum depth criteria at one site, met the average depth criterion at one site, and met the maximum depth criterion at one site. Because the stream meets the depth criteria, the committee recommends retaining the WBCR designation.
